Solution Architecture:

A complicated process with numerous sub-process, solutions architecture connects business issues with technological solutions. Its objectives are to:

- Use the LSTM technique to identify the best technological solutions to address current issues in businesses
- Explain the software's layout, traits, behavior and other features in order to anticipate crude oil prices more precisely.
- Offer guidelines for how the solutions will be developed, managed and delivered.

Example- Solution Architecture Diagram

Data set

Load the Data

Scale the Data

Scale LSTM Model

Train the Model

Validating the LSTM technique

Test the model

Split the Data for training and testing

Forecast the future data

Calculate forecast accuracy
